- Absolutely safe and easy-to-assemble fixing system
- Universal fixing system for all front door types

blaugelb Door Handle angle stilts 45° with birch inlay

Everything firmly in hand – stainless steel door handles from blaugelb.

Product features:

Made of high-grade stainless steel and natural birch bark, the blaugelb Door Handle angle stilts 45° with birch inlay offers an attractive combination of uniqueness and outstanding design. Richly varied yet soothing in its texture, the centre section of birch bark impresses with its pleasant, satiny-soft feel. Even when wet the birch material retains its grip, offering warm contact with the door even in colder months.

The birch bark is extremely long-lasting and easy to maintain and also inhibits bacterial and fungal growth.

The deliberate contrast between the middle section made of real birch bark and the brightly polished handle ends and handle bases achieves a bicolor effect that further underlines the quality of this door handle series. The degree of gloss of the polish gives the door handle an utterly convincing mirror-like quality.

When combined with the safe and easy-to-assemble blaugelb fixing systems for different door types, blaugelb Door Handles are a reliable solution for the door.

blaugelb stainless steel door handles can be used without any problem on the following door types:

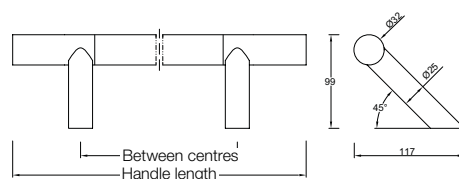

- On aluminium doors
- On plastic doors
- On wooden doors
